## **DETAILED ACTION**

### ***Response to Amendment***

The Examiner acknowledges the amending of claims 1, 2, 4, 5, 8, 9, 11, 12, and the cancellation of claims 3, 6, 7, 10, and 13-14.

### ***Response to Arguments***

Applicant's arguments with respect to the pending claims have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 2, 4-5, 8-9, and 11-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Yamada et al. (US 7102282).

With respect to claim 1, Yamada discloses a light emitting device comprising a resonator structure (fig.19 L) comprising a first electrode (fig.19 #12), a second electrode (fig.19 #14/15), and a light emitting layer (fig.19 #13c) between the first and second electrodes; and a color filter disposed over the second electrode (fig.19 #20), wherein the resonator structure resonates light generated in the light emitting layer and is extracted from at least the second electrode side of the electrode, and the materials

and thicknesses of the first and second electrodes are selected to that the strength of the outside light reflected by the first and second electrodes are substantially the same (col.7-8 lines 49-5 describe the first and second electrode materials (refractive index) and thicknesses are chosen such that the phase portion of the disclosed formula is satisfied; further, col.12 lines 48-64 describes that the cavity formed of #13, as well as the bounding electrodes, is of a composition such that external light is prevented from being reflected, meaning no reflection from either electrode).

With respect to claim 2, Yamada discloses that of claim 1, and the use of the stated formula (abs.).

With respect to claims 4 and 5, Yamada discloses a semi-transparent reflection layer (fig.4 #14) is provided on the second end, and has an extinction coefficient of 0.5 or more and a refractive index of 1 or less (since is made of Mg/Ag alloy).

With respect to claims 8-9, Yamada further discloses multiple display devices (col.2 lines 44-51).

With respect to claims 11 and 12, Yamada discloses a semi-transparent reflection layer (fig.4 #14) is provided on the second end, and has an extinction coefficient of 0.5 or more and a refractive index of 1 or less (since is made of Mg/Ag alloy).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2828
